= Less open face at impact even when hitting the toe
More Shot Stability
+
CG height : Low
High launch

AW, SW

CG length : Face Center
= Less open face at impact even when hitting the toe
More Shot Stability
+
CG height : High
More spin

More Offset & Long Face Length
∨
Easy to aline at address with more confidence

Optimum head size flow for this iron head design

Progressive face length to optimize the best performance for each club head from #6 to SW.

Size that connects from the Utility club

Size that minimizes the resistance of rough turf

[OPTION]

Head Weight Adjustment

These weights can be replaced with lighter or heavier weights to achieve the head weight that you prefer. +/- 4g range.

OPTION WEIGHT SCREW

Aluminum weight : 1g

Stainless weight : 3g

Tungsten weight : 5g

Standard Setting

EF-02I (#6)
254.5g — 258.5g — 262.5g
 Head wt. (std.)

-4g ← → +4g

* The weight change requires special equipment and adhesive.

* Please contact our authorized dealers for the change.

** Any defects including rust after changing weights are not covered by our warranty.

ATTENTION

DLC (Diamond like carbon) coating is applied to this iron. The coating will wear out as it is used accordingly, but there is no problems with the performance because coating is applied to the base coat.

* Peeling paint is out of warranty.
